

Why Should My Horse Have Access To All Four Dynamite® Free Choice Minerals?

what are the four dynamite free choice minerals ?

Dynamite Free Choice Minerals are actually four different and separate mineral combinations that horses when left to forage in the wild would consume as their bodies needed. In nature, horses would roam many miles in search of natural clays, mineral deposits, herbs, and plants in an effort to get all the minerals they need to be balanced. Since our horses cannot roam free in search of these minerals, it's up to us to provide them with the opportunity to self-regulate their mineral intake. That's why it's called Free Choice – it's up to the horse what it needs at any point in time.

included in dynamite free choice minerals are:

- **1 to 1 Free Choice™** – Designed to provide commonly deficient elements necessary for the proper development of bone, ligaments, tendons, connective tissues and milk production. The 1 to 1 Free Choice provides a ratio of 1 part Calcium to 1 part Phosphorus.
- **2 to 1 Free Choice™** – Similar to the 1 to 1 Free Choice, the 2 to 1 Free Choice is important for the development of bone, ligaments, tendons, connective tissues and milk production. However, 2 to 1 Free Choice provides a ratio of 2 parts Calcium to 1 part Phosphorus...

Why do you need both 1 to 1 Free Choice and 2 to 1 Free Choice? As Rowan Emrys, C.N.M.T. and Dynamite Director explains, *“Although a general rule of thumb is to offer 1 to 1 Free Choice to alfalfa eaters or phosphorus deficient soils and 2 to 1 Free Choice to grass eaters or calcium deficient soils, it is best to offer both at all times and let the horses decide which is best for themselves as individuals. After all, some may prefer a 1.5 to 1 ratio!”*.

- **Izmine™** - Imagine being able to give all your horses all-natural, unprocessed minerals that are derived from pre-historic, organic deposits of kelp, crustaceans, and other marine flora determined to be 60-127 MILLION years old. That's exactly what Izmine is; Izmine provides 72 trace-minerals in an organic state, including proteins, making it totally bio-available to horses for all those nutrients missing in our modern soils. To produce nature's 'recipe' Dynamite does not alter this product in any way - it's taken straight from the earth to the package.
- **Natural Trace Mineral Salt (NTM™)** – Once again, Dynamite has looked to Mother Nature for our NTM Salt. NTM Salt is 100% natural deposits from a prehistoric seabed. Better than sea salt, because it has not been affected by pollution, no artificial ingredients or flowimprovers of any kind are added. Hand selected, crushed, screened and packaged for your horse.

Divine Coosa, 2008 and 3 Time ARHA World Champion Sire, uses Dynamite Free Choice Minerals.

your horse knows...

Only your horse knows which minerals it needs right now. That's why it's important to put out ALL FOUR Dynamite Free Choice Minerals at all times to give your horse the opportunity to self regulate. If you only put out one or two of the Dynamite Free Choice Minerals you may be depriving your horse of essential minerals. Trust your horse. When given the chance to choose the right minerals, your horse will know what it needs.

affordable, easy and convenient

It's never been easier to start your horse on Dynamite Free Choice Minerals than with the Free-Free Pack available from Dynamite. The Free-Free Pack comes with a five pound bucket of all four types of Dynamite Free Choice Minerals. Plus four free mineral feeders. Simply tack up the two, two compartment feeders and put a half-cup or so of each in the feeders – each feeder is labeled so you remember which mineral goes where. Refill as needed and when your horse eats all the mineral from one or more of the 5 pound buckets, simply re-order what you need.

your horse will thank you for it!
